

## The Model "M"

The Model "M" General-Purpose is a 1-2-plow cultivating tractor of standard-tread type. Like the Model "MT," it brings a complete system of farming to smaller farms and serves on larger farms as an efficient "helper" to larger tractors. In power, speeds, economy, ease of handling, ease of servicing, comfort for the operator, mechanical features, and conveniences, it is practically the same as the "MT." Where the "MT" has two hydraulic control levers, the Model "M" has but one, as one is all that is needed for handling "M" one-row equipment. Rear wheels on the "M" are adjustable from 38 inches minimum to 52 inches maximum. Regular front wheels are fixed, but adjustable front axle can be furnished as extra.

## OTHER JOHN DEERE *"M" Series* TRACTORS

## Track Type Model "MC"

If your hillsides are too steep to work with wheel tractors . . . if you have difficult traction conditions such as light soils, wet ground, or rough terrain . . . you will want to investigate this compact, powerful "little giant" among track-type tractors. It gives you 2-3-plow capacity, handles an 8-foot double-action disk harrow. There are four forward speeds and reverse. Length is 102 inches; width, 67 inches; height about 50 inches. Approximate weight, 4,000 pounds. Regular equipment includes starter, battery, generator, adjustable air-cushion seat, power take-off, fenders, sod-pan, and same engine as "M" and "MT" Tractors. Belt pulley, hydraulic control, hydraulic tool carrier, and a wide variety of equipment for field, orchard, and vineyard are available.
